to schedule a **FREE Demo!**

NEW

High ROI

We created the i500 scanner with a high Return On Investment in mind. The design and software allow for an unparalleled performance at a very competitive price.

STL

Flexibility

The i500 uses an open CAD/CAM system, allowing you to export STL files out of Medit Link and share it with your preferred lab, or to easily transfer files and track your progress throughout the entire workflow.

HD

High resolution

The i500 produces realistic images which are high in resolution and rich in detail, allowing you to distinguish between tooth structure and soft tissue for easy identification of margin lines and undercuts.
